

World Ocean Day 2020

Celebrating World Ocean Day together:

Everyone can join in whether you are at home with your family, or in school, it would be great if everyone can join in, and share your amazing projects with us at Gig Mill.

World Oceans Day gives us a chance to consider the importance of oceans in our life, and to do something small to tell others about conservation. Oceans are home for millions of species including plants and animals.

Why not join in today, and this week to celebrate world oceans day?

There are various activities and events organized on World Oceans Day every year. You can join any of these and participate in World Oceans Day celebrations. Check here the [official website](#) for the same.

You can raise awareness about the conservation of oceans. A very interesting way to share this kind of information is by watching documentaries such as [The Blue Planet](#), [A Plastic Ocean](#), [Mission Blue](#), [Sharkwater](#), etc.

Plastic is one of the major causes of marine pollution. We need to cut down plastic accumulations in the oceans by avoiding single-use plastics. In school today we will be reusing single use plastics and old CDs to create some artwork.

You can create a piece of artwork, or a poster to raise awareness about ocean pollution.

You could create a seaworld or aquarium in a recycled shoe box, or find out more the ocean and its creatures.

Please share your creations with us so that we can create a gallery with all your wonderful ideas.
