

Notes for parents

During this period of isolation, you might want some guidance on how you can help your children develop their problem solving, reasoning and fluency skills in mathematics.

Maths games provide the perfect way to develop and challenge your children mathematically whilst entertaining them at the same time.

Nrich.maths.org is a maths website that host a range of excellent maths games and interactives that are excellent to develop your child's mathematical thinking. As the website is so vast, we have picked out a few of our favourite games which we will be adding to every week. We have started with just five games for each key stage which should keep you busy if you want to have a mathematically input each day. If you put the name of the game into the search bar on the top left of the home page, then it should take you straight to the game.

Before you begin you might want to watch the short three-minute video which sits on the site. It explains how you can very simply support your children. Good luck and have fun together.
